Digital Consultations

Babylon's **Healthcheck** tool can help you learn about your health and suggest changes for a healthier living. AI services are not a substitute for a doctor, and should not be used in a medical emergency.

Babylon has partnered with Health Net to provide access to healthcare anytime, from your phone.

Health Net and Babylon's shared vision is to transform the healthcare system - by providing access to technology that will drive better health outcomes. Health Net members can now book a video appointment 24/7 through the Babylon app. Members can also use the app to tap into a full suite of digital healthcare tools to get information about their health. The Babylon app allows you to take control of your wellness journey. Our Chatbot and Healthcheck services are great places to start.

Check your symptoms instantly

Feeling off? Describe what's wrong and our AI-powered Chatbot can help. Answer a few quick questions about your symptoms and we'll direct you to potential causes and options for best next steps to take. It can also connect you with helpful resources and put you into direct contact with a healthcare provider, if you choose to go that route.

Talk to a healthcare provider anytime

Babylon's providers are available to you via video call 24/7 and can address health issues like cold and flu, nausea, depression, and chronic health conditions. They can give you medical advice, refer you to specialists and prescribe medication for pickup at your local pharmacy.

Use our COVID-19 Care Assistant

Worried you or someone you know might have coronavirus? Our COVID-19 Care Assistant can help assess your symptoms, give you updated information on the virus, provide tools to self-monitor your health and connect you with a healthcare provider, if needed. It's easy to use and helps you get the right care at the right time, without having to leave your home.

Assess your current health

Answer questions about your lifestyle and family history to create a report of your overall current health. Identify your risk factors and learn how to stay healthy long-term.
